<b>Office Action Summary</b>	<b>Application No.</b> 10/567,781	<b>Applicant(s)</b> BALTES ET AL.	
	<b>Examiner</b> James F. Hook	<b>Art Unit</b> 3754	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 09 February 2006.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.

## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, and 8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Greer (GB 1,163,335).

Claims 1, 2, and 8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Huarte (FR 2,542,403).

Claims 1, and 2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Richard (EP 533,527).

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Jurjevic (EP 230,715).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3754

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-5, 7, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Greer (GB 1,163,335) in view of Kriesels. The reference to Greer discloses all of the recited structure with the exception of providing the piston with extension webs having level surfaces, and providing the threads on the outside end of the housing than the inside. The placing of the threads on the outside instead of the inside of the end of the housing is considered merely a reversal of parts and it would have been obvious to one skilled in the art to modify the housing by placing the threads on the outside instead of the inside of the housing as such is merely a reversal of parts requiring only routine skill in the art. The patent to Kriesels discloses a piston used in an accumulator environment comprising an orifice for flow near 29 having angled walls on both sides of the piston orifice, webs 32, and a level surface on the outside of extension 30 where flow can travel between the wall of the housing and the level surface. It would have been obvious to one skilled in the art to modify the piston element 69 in Greer by providing extension webs, and providing a level surface which is on an extension that extends the length of the piston as suggested by Kriesels where such would improve the fluid flow control from the orifice by allowing the flow to only travel in part of the housing.

***Allowable Subject Matter***

Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***

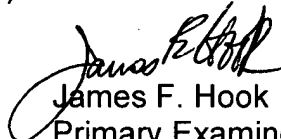

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references to Sakuma, Tice, Zahid, Lachaux, LeBlanc, Hasegawa, Schommer, Perrott, and Park disclosing state of the art accumulator structure.
